Sales Management Audit

Strategic Concepts (I) Pvt. Ltd.

Preface

Sales Management Audit is an effort to probe the Sales Management function presently in vogue in an enterprise vis-à-vis its efficiency and effectiveness towards achieving organizational goals and overall alignment to the mission and vision of the organization.

The quotient of customer centricity, the metrics of customer satisfaction index, the dyad of skill – will matrix of sales team and the motivation charter of the sales team are some of the key deliverables that we look at while conducting the said audit.

Just like the medicine of doctor works very well only if the patient agrees or realizes that there is a problem, similarly such audits and subsequent actions get best results when the client has an inkling or understanding of the key problem areas or is very clear about the milestone that they are trying to achieve through this joint collaboration with us.
